

# LoudnessGracious

Loudness Normalizer With A Touch Of Refinement

**Loudness Gracious** is an Audio Suite plugin, an offline & destructive tool. You will find it in the **Pro Tools > AudioSuite** menu (it won't appear in the track inserts list).

Why the name? It meets your loudness target with graceful transparency, marrying our legendary Ride algorithm to an ITU-R BS.1770-based architecture.

## CONTROLS

<b>Source Level</b>	Displays the current clip's loudness (LKFS) after Analyzing.
<b>Threshold</b>	Ignores clips if their loudness levels fall below this value. <i>Only TP limiter applied if engaged.</i>
<b>Min Clip Duration</b>	Skips clips shorter than this length. <i>Only TP limiter applied if engaged.</i>
<b>Soft Range Boost</b>	Slide toward <b>More</b> to lift quiet passages; toward <b>Less</b> for subtler gain.
<b>Loud Range Reduction</b>	Slide toward <b>More</b> to tame loud passages; toward <b>Less</b> for gentler attenuation.
<b>TP Limiter</b>	Engages a limiter with a selectable range of -5 to 0 dbTP.
<b>Target Level</b>	Choose between -34 and -14 LKFS in 0.5db steps.

## FUNCTIONALITY

If you are familiar with our other plugins **WaveRider** and **Defaulter**, you'll notice that **Loudness Gracious** borrows functions and GUI elements from both. An elegant solution to level targeting.

- You can measure the loudness of a clip or a selection of clips by clicking Analyze.
- Set your range ratio sliders as described above, set your TP level, set a Target level and hit render.
- Choose the “clip by clip” option in Audio Suite if you are processing more than one clip, and you want to retain the edit points and handles (dialog, vocals etc.). Note, in clip by clip mode, existing clip gain automation won't be taken into account, you should clear them before running LG.
- Choose the “entire selection” option in Audio Suite if you want to render the entire selection into one file per track.
- For stereo clips, use the “entire selection” and “multi-input” option.  
(Only mono and stereo channel configurations are supported)

## LICENSING

If you are just trying out Loudness Gracious, you can simply click TRY when the license screen pops up. We offer a 14-day fully functional trial period. Requires a free iLok account; no USB dongle needed—both trial and full licenses work with iLok Cloud.
